

STANDARD OPERATING PROCEDURES
PATHOLOGY-LABORATORY SERVICES

I. SCOPE OF SERVICE

- A. Laboratory Services under the direction of a Laboratory Director who is board certified in Anatomic and Clinical Pathology are available to all patients of all ages and include diagnostic testing, therapeutic monitoring, and emergency testing. Quality, accuracy, reliability and timeliness are central to the laboratory mission.
- B. The Laboratory offers services seven days a week, 24 hours a day, to patients of all ages. Non-emergent services are not necessarily available at all times.
- C. The laboratory offers a full range of clinical testing and support services in each discipline, including:

BLOOD BANK
SERVICES

- compatibility testing
- antibody detection and identification
- blood product/component modification, storage and issue
- bone bank: storage, issuing

CORE
SERVICES:
HEMATOLOGY
COAGULATION
URINALYSIS
CHEMISTRY

- routine and special hematologic testing
- bone marrow collection/analysis
- coagulation studies
- urinalysis: routine and special urine examination
- routine and special analyte testing
- therapeutic drug monitoring
- blood gas analysis
- thyroid function testing
- endocrine assays
- heart, lung, liver and kidney function tests
- infectious disease marker testing
- toxicology: emergency screening and routine identification
- syphilis serology
- referred specimen preparation and send-out

MICROBIOLOGY
SERVICES

- bacterial culture and antibiotic susceptibility testing
- parasitology
- mycology
- serology
- virology
- molecular diagnostic testing (PCR)

HISTOLOGY
CYTOLOGY
SERVICES

- Histology: autopsy and surgical processing, specialized immunologic staining
- Cytology: routine and special cytologic exams from all body sites

- POINT OF CARE TESTING SERVICES
 - staff orientation, training and competency
 - proficiency testing
 - quality assurance documentation

- CLIENT SERVICES (Central Collection and Laboratory Office)
 - in-house phlebotomy
 - specimen preparation and distribution
 - off-site contracted phlebotomy (Wellness, etc.)
 - patient registration and orders
 - verification of medical necessity
 - client assistance with report
 - telephone communications

- PATHOLOGY SERVICES
 - surgical: frozen section diagnosis, diagnostic histopathology, special procedures
 - autopsy: complete postmortem exam on hospital and ME cases
 - medical transcription/procedure scheduling services
 - interpretation of GYN and non-GYN cytology specimens
 - interpretation of peripheral blood smears
 - performance and interpretation of bone marrow biopsies and aspirates
 - performance of fine needle aspiration (FNA) of palpable lesions
 - provision of immediate on-site evaluation of FNAs and needle biopsies performed by physicians in St. Luke's Hospital
 - provision of consultation to physicians and other healthcare providers concerning selection and interpretation of laboratory tests
 - directorship and oversight of all laboratory services

- MLS/MEDICAL TECHNOLOGY PROGRAM
 - accredited MLS/Medical Technology Program.
 - under the direction of the Laboratory Director, the Director Laboratory Management and the Program Coordinator.
 - a full year of didactic and clinical experience is provided which is equivalent to and transferable as a year of college credit.
 - students who successfully complete the program are eligible to take a national Medical Laboratory Science certification examination.

II. HOURS OF OPERATION

OUTPATIENT HOURS:

Monday – Friday: 0600 – 1800 hours

Saturday: 0700 - 1100 hours

Outpatients arriving outside of routine hours will be accommodated as promptly as possible.

Monday – Friday: Appointment only:

- bone marrow biopsy
- dark-field exams
- fine needle biopsies
- ACTH stimulation test

PATHOLOGY OFFICE HOURS:

Monday – Friday: 0700—1700 hours

Nights, Weekends and Holidays: Pathologist on call

HISTOLOGY HOURS:

Monday – Friday: 0500 - 1730 hours

Specimens delivered by 1700 hours Monday through Friday will be processed for microscopic examination and notification of the physician on the following day. (Saturday specimens are reported on Monday.)

INPATIENT/ED BLOOD COLLECTION AND TESTING:

Monday – Sunday 0000 – 2400 hours

III. POLICIES

- A. Laboratory testing is performed in compliance with federal and state laws. Under Iowa law, only licensed physicians (or authorized individuals) may order laboratory testing.
- B. Requests for laboratory testing must be in writing and signed by the requesting physician (or authorized individuals) before services can be performed.
- C. Requests for laboratory testing by physicians (or authorized individuals) without medical staff privileges at St. Luke's Hospital will be reviewed by a Pathologist before services are performed.
- D. Requests for laboratory testing must have supporting documentation of signs/symptoms or ICD-9 codes specific and consistent with the medical necessity for the testing to be performed. This supporting documentation must be in the patient's chart or included with the order to assure proper coding to comply with third party payer rules for medical necessity.
- E. Turn around time for laboratory testing varies by test and where the testing is performed. Testing performed locally by automated methods can be available within minutes of specimen receipt. Other testing (e.g, cultures and reference sendouts) may require days for processing and reporting. See Addendum A for Laboratory Testing Expected Turnaround Time.
- F. All inpatient STAT requests are to be phoned or paged to the laboratory in addition to being ordered in the computer. If it appears there will be an excessive delay in reporting results, a laboratory supervisor will be notified and will determine whether notification of the nursing staff or physician is warranted. The nursing unit will be kept informed of undue delays.
- G. A nurse, nursing technician, or nursing assistant will accompany and remain with the phlebotomist while specimens are collected from patients in the inpatient psychiatric units.
- H. For other laboratory related policies, refer to
 - 7000-01 [Requesting, Dispensing, and Administering Blood](#)
 - 7000-06 [Blood Alcohol \(Ethanol\) For Legal Purposes \(Chemical Test for Intoxication\)](#)
 - 7000-07 [Withdrawal Of Specimens For Law Enforcement Agencies](#)
 - 7000-08 [Alcohols, Legal Draw and Hold](#)
 - 7000-09 [Blood Collection For Non-Laboratory Personnel](#)
 - 7000-10 [Massive Transfusion](#)
 - 7000-11 [Point of Care Testing](#)

IV. BLOOD COLLECTION AND TESTING

The laboratory offers centralized blood collection and testing services. Blood collection and processing is based on first in, first out processing according to order priority. Blood testing and reporting is based on first in, first out processing for random-access automated testing platforms. Manual tests (e.g, meconium testing, electrophoresis) are performed less frequently. See Addendum A for Laboratory Testing Expected Turnaround Time. Laboratory results for morning physician rounds are available for critical care patients by 0600 and medical surgical patients by 0700.

V. PATIENT ORDERS IN ELECTRONIC MEDICAL RECORD (EMR)

- A. The request/order for clinical laboratory testing is entered into the EMR by physician or designee. Use appropriate written requisition for Histology/Cytology orders.
- B. Enter the frequency and priority level as specified by the physician. See Table 1.

Table 1.

Rank	EMR Code	LIS Translation	Specimen Collection Definition/Goal
------	----------	-----------------	-------------------------------------

1	STAT*	S	Potentially life threatening. Specimen is collected within 10 minutes of order.
2	Timed	T	Time sensitive. Specimen is collected \pm 15 minutes of specified time.(e.g. trough medication level, HepXa, K+ bolus)
3	AM draw	RT	Routine draw. Specimen is collected during designated AM swarm : <ul style="list-style-type: none"> ▪ 0400 for critical care units and CCH ▪ 0500 for med/surg units ▪ 0600 for all other units
	Today-Next draw		If routine lab is ordered after AM swarm, it will be collected on the next sweep time. ** Sweep times: 10a,12p,14p,16p,18p
As Ordered	Add On		Lab will add on to previously drawn specimen if possible.

*All inpatient STAT requests are to be phoned or paged to the laboratory in addition to being ordered in the computer.

**Routine lab requests prior to sweep time (e.g. patient to be discharged) should be called to lab

VI. SPECIMEN LABELING

- A. To prepare for collection of a lab specimen, the order must be released from the EMR (HIS) by "Print Label and Collect Specimen". This is the action that will release the order to the LIS and generate the specimen label on the blaster printer.
- B. Prior to any labeling, proper identification of the patient must be established
- C. Following the collection of specimens and before leaving the patient's room or bedside, label the specimen(s). NEVER LEAVE THE PATIENT'S ROOM PRIOR TO LABELING (except as noted below).
 1. In most instances, the person collecting the specimen should label the specimen. Situations may occur (e.g. in the Emergency Department) when specimens are collected by someone (e.g. Paramedic or Physician) and handed to laboratory personnel to label. If the laboratory personnel have WITNESSED the collection, he/she may label the specimen. If not, the person collecting the specimen must label it him/herself.
 2. Due to the fact that urine specimens are not always collected in the patients room in the Emergency Department, those specimens are to be labeled immediately following the receipt of that **specimen in the presence of the patient**
 - a. in the restroom
 - b. in the patients room.
- D. The LIS label should be used to label specimens unless:
 - a. It is a blood bank specimen
Due to the grave consequence of crossmatching blood from a mislabeled specimen, all blood bank specimens that may be potentially used for transfusion MUST BE HAND LABELED FROM THE PATIENTS ARMBAND. These specimens include:
 - Type and Screen (TYSC)
 - Blood Bank to Hold (BBHOLD)
 - ABO/RH (ABORH)

The specimen MUST BE HAND LABELED FROM THE PATIENTS ARMBAND with:

- Patients first and last name
- Medical record number or red B-Band number
- If a red B-Band number is used to label a specimen for crossmatching, the red B-Band must stay on the patient until the expiration on the red B-Band or the patient is discharged, whichever comes first.
- Collectors initials

- Time and date of collection

Accepting a specimen for crossmatch with a deviation from this labeling protocol must only be done after serious considerations and must be approved by a lab supervisor or pathologist.

b. There is no blaster printer on your unit
If there is no blaster printer on your unit you may use a preprinted HIS label.

VII. OUTPATIENT and NON-PATIENT ORDERS

- A. Legibly complete an Outpatient Requisition to order laboratory testing for outpatients/non-patients. The following information is required for processing the order in a timely manner:
- Patient name,
 - Date of Birth,
 - Gender,
 - Ordering physician's name printed,
 - Ordering physician's signature or signature/initials of designee,
 - Insurance information, and
 - ICD-9 code(s), list all that apply for each test ordered or,
 - Reason(s) for ordering the test and supporting signs/symptoms/diagnosis specific for ICD-9 coding translation
- B. Standing orders, executed in connection with an extended course of treatment, must also include specific diagnostic information which is consistent with the information documented on the patient's chart supporting medical necessity and coding.
- C. The following practices are prohibited:
- Use of diagnostic information provided by the physician from earlier dates of service.
 - Use of "cheat sheets" that provide diagnostic information that has triggered reimbursement in the past.
 - Use of computer programs that automatically insert diagnosis codes without receipt of diagnostic information from the physician.
 - Making up diagnostic information for claims submission purposes.

VIII. SPECIMEN LABELING, HANDLING, AND DELIVERY REQUIREMENTS

- A. Each specimen container must be clearly labeled with:
1. Patient's first and last name
 2. Medical Record number
 3. Time and date of collection
 4. Initials/code of the collector
 5. Test(s) ordered
 6. Specimen source, if other than blood
- B. STANDARD Precautions for blood and body fluid must be adhered to for all patients and for all specimens. All specimens couriered to the laboratory by non-laboratory personnel must be placed in a secondary container, e.g., a zip-lock plastic bag with requisition pouch, and considered a biohazard. All handlers of specimens must wear gloves for their protection.
- C. Specimens are to be transported/delivered to the lab promptly! See SOP 8320-03 [Tube System, Pneumatic](#) for transport guidelines for laboratory specimens.

IX. HISTOLOGY AND CYTOLOGY ORDERS AND SPECIMENS

- A. Requests for histology and cytology testing are not ordered in the computer (HIS) by nursing personnel. A completed requisition, including relevant clinical history and ordering physician's first/last name or six digit physician number, must accompany all properly labeled specimens. Histology requisitions are available

through Supply Distribution. The Cytology requisitions are available on the St. Luke's intranet, under the clinical tab.

- B. After comparison of specimen collected to corresponding order requisition for complete and accurate labelling, delivery of the specimen will be documented on the order requisition by time, date and initials of person delivering, and initials of staff receiving.
- C. To maintain specimen integrity and assure timeliness of result reporting, all tissue specimens are delivered to the laboratory promptly following collection. Do not send tissue specimens through the pneumatic tube system.
- D. Select tissues should always be sent to the laboratory fresh (unfixed) and as soon as possible. See Table. 2 for list of select tissues to be prepared fresh (unfixed) for laboratory evaluation.

Table 2. Select Tissue To Be Prepared Fresh (Unfixed)

▪ Axillary dissection	▪ Liver biopsy (for Iron studies)	▪ Salivary gland
▪ Bladder cystectomy	▪ Lung	▪ Spleen
▪ Breast	▪ Lymph nodes	▪ Stomach resection
▪ Bowel resections	▪ Ovarian tumors or cysts	▪ Submandibular gland
▪ Cervical cone biopsy	▪ Paroid gland	▪ Submaxillary gland
▪ Esophageal resections	▪ Placenta	▪ Testicle
▪ Kidney	▪ Radical neck dissections	▪ Thyroid
▪ Limb amputation (except finger/toe)	▪ Prostatectomy	▪ Uterus

- E. Extremely large specimens may also be submitted fresh (unfixed) and must be promptly delivered to the laboratory.
- F. All other surgical specimens should be delivered in formalin (10 to 20 times the volume of the specimen).

X. SURGICAL SPECIMEN EXAMINATION

Routine surgical specimens are received and examined by a Pathologist until 1700 hours Monday through Friday. Emergency specimen examination(s): Pathologists are available on call 24 hours for frozen specimen examination.

XI. CRITICAL TESTS:

Critical tests are those tests which will always require rapid communication of the results, even if results are normal. The following procedures or tests have been defined as critical tests where all results will be called:

- Frozen Section
- Cytologic evaluation of sample adequacy for image guided biopsy

XII. CRITICAL VALUES:

- A. Critical values are those findings (even from routine tests), which will always require rapid communication of the results.
- B. Variation in reporting critical values causes confusion for clinical decision makers and may have a negative impact on patient outcome. Due to shared medical staff, critical value reporting is standardized with other area laboratories. See Table 3. Standard Laboratory Critical Values.
- C. Standard Laboratory Critical Values will be reviewed annually by supervisor review of procedures. Periodic review of critical values will include researching the literature and standards for best practice. Change requests are submitted to St. Luke's Laboratory Director.
- D. All critical values are phoned and read back to a nurse in the nursing unit (or at the physician's office for OP and NP) and documented in the logbooks and/or through computer entry. Point of Care results are managed as per individual point of care procedures and per POC 501_POCT Compliance Policy.

Table 3. Standard Laboratory Critical Values

Chemistry	<i>Less than</i>	<i>Greater than</i>	Hematology	<i>Less than</i>	<i>Greater than</i>
Acetaminophen		or =150.0 mcg/mL	Hematocrit (age 0-14 days)	30.0%	70.0%
Blood pH (age >30 days)	7.2	7.6	Hematocrit (age 15-30 days)	24.0%	70.0%
Blood pH (age <30 days)	7.2	7.5	Hematocrit (age >30 days)	21.0%	60.0%
Arterial pO2 (age 0-23 mo)	50 mmHg	300 mmHg	Hemoglobin (age 0-14 days)	10.0 gm/dL	25.0 gm/dL
Arterial pO2 (age >2 years)	50 mmHg	200 mmHg	Hemoglobin (age >14 days)	7.0 gm/dL	20.0 gm/dL
Capillary pO2 (age 0-23 mo)	40 mmHg	80 mmHg	Platelet count	50 TH/mm3	1000 TH/mm3
Bilirubin, Total (neonatal)		16.0 mg/dL	WBC (age 0-30 days)	5.0 TH/mm3	50.0 TH/mm3
Calcium (age 0-7 days)	6.0 mg/dL	12.0 mg/dL	WBC (age >30 days)	2.0 TH/mm3	40.0 TH/mm3
Calcium (age >7 days)	6.0 mg/dL	13.0 mg/dL	Neutrophil (absolute)	500/mm3	
Carbamazepine (tegretol)		or = 15.0 mcg/mL	CSF WBC		10 TH/mm3
Carbon Monoxide		20%	Coagulation	<i>Less than</i>	<i>Greater than</i>
Digoxin		2.5 ng/mL	INR		5.0
Ethanol		300 mg/dL	Fibrinogen	50 mg/dL	
Gentamicin, peak		12.0 mcg/mL	PTT-nonheparinized		50 seconds
Gentamicin, trough		2.0 mcg/mL	Heparin Xa		≥1.05 IU/mL
Glucose (ages 0-7 days)	40 mg/dL	200 mg/dL	LMW Heparin Xa		>1.10IU/mL
Glucose (ages >7 days)	50 mg/dL	400 mg/dL	Microbiology/Serology		
Lithium		2.0 mmol/mL	Positive blood gram stain or culture		
Magnesium - w/o Mg therapy	1.0 mg/dL	4.7 mg/dL	Positive CSF gram stain or culture		
Magnesium - w/ Mg therapy		8.0 mg/dL	Positive sterile body fluid		
NAPA		20.0 mcg/mL	Positive malarial smear		
Phenobarbitol		40.0 mcg/mL	Positive systemic fungus culture		
Phenytoin (Dilantin)		30.0 mcg/mL	Positive Cryptococcal antigen		
Phosphorus	1.0 mg/dL	9.0 mg/dL	Positive Acid Fast Bacteria (AFB) stain/TB culture		
Potassium (age 0-30 days)	or = 3.0 mmol/L	7.0 mmol/L	and the following isolates:		
Potassium (age >30 days)	or = 3.0 mmol/L	6.0 mmol/L	<ul style="list-style-type: none"> ▪ Bacillus anthracis ▪ Bordetella pertussis ▪ Brucella ▪ Clostridium botulinum ▪ Clostridium perfringens ▪ Clostridium tetani ▪ Croynebacterium diphtheriae ▪ Francisella tularensis ▪ Leptospira ▪ Listeria monocytogenes ▪ Moraxella lucanata ▪ MRSA ▪ VRE 		
Procainamide		10.0 mcg/mL	Blood Bank/Transfusion		
Procainamide/NAPA		30.0 mcg/mL			
Salicylate		30.0 mg/dL	Positive Newborn DAT		
Sodium (age 0-30 days)	125 mmol/L	150 mmol/L	Incompatible or problem crossmatch		
Sodium (age >30 days)	120 mmol/L	160 mmol/L	Positive fetal bleed ≥ 30 ml (whole blood)		
Theophylline		20.0 mcg/mL	Transfusion Reaction Evaluation with positive gram stain		
Tobramycin, peak		12.0 mcg/mL	Acute Hemolytic Transfusion Reaction		
Tobramycin, trough		2.0 mcg/mL			
Tricyclic Antidepressant		500.0 ng/mL			
Valproic acid (Depakene)		200.0 mcg/mL			
Valproic acid (Depakene) (age <18 years)		150.0 mcg/mL			
Vancomycin, peak		40.0 mcg/mL			
Vancomycin, trough		20.0 mcg/mL
