

Greater Green Bay Skilled Nursing Facilities Antibioqram

An antibiogram is a collection of data summarizing the susceptibility patterns of bacteria to various antibiotics. An antibiogram is meant to be used as an aid in selecting empiric therapy and monitoring resistance trends. The data below is presented in a percentage of isolates susceptible per the listed antibiotic and organism combo (Drug/Bug).

Note that some organisms were isolated fewer than 20 times, this may skew susceptibility percentages.

Greater Green Bay Skilled Nursing Facilities	Antibiotics															
	Ampicillin	Amp/Sulbactam	Cefazolin	Ceftazidime	Ceftriaxone	Ciprofloxacin	Clindamycin	Gentamicin	Nitrofurantoin*	Oxacillin	Pip/Tazo	Tobramycin	Tetracycline	TMX	Vancomycin	
All Sources	# Isolates	Percentage Susceptible														
Escherichia coli	95	46	61	81	87	87	40	96	87	99	95	63				
Klebsiella pneumoniae	26	0	92	100	100	100	100	100	58	100	100	81				
Proteus Mirabilis	40	83	88	80	100	98	50	93	0	100	93	53				
Pseudomonas aeruginosa	11				91		45	73		73	73					
Staphylococcus aureus	47						38	55	100	53		85	100	100		
Enterococcus faecalis	14	100							93						100
