
Overview

The mission of CentraCare Laboratory Services (CCLS) is to provide each patient with high-quality laboratory testing that is as up-to-date and cost effective as medical science, modern technology, and highly trained personnel will allow.

This high-quality laboratory testing is enhanced by a team of pathologists who direct the operations of the laboratory. Under their direction, CCLS has consistently maintained accreditation by the College of American Pathologists (CAP) and The Joint Commission (TJC).

CCLS operates from 5 facilities. The CCLS - Rivercampus site is located within the St. Cloud Hospital, the CCLS - Plaza site is located at the CentraCare Health Plaza, CentraCare Clinic Rivercampus is the location of a phlebotomy draw site, CentraCare Clinic-Adult and Pediatric Urology is located in Sartell, and Centracare Clinic-Albany is located in Albany.

The above standards of quality, coupled with state-of-the-art technology, allow CCLS to provide high-quality, sophisticated, clinical testing to aid in the diagnosis and treatment of hospital patients.
