# *Reporting*

## **Critical Results**

Critical results are communicated directly to the physician, physician's assistant, RN, or other designated individual as soon as possible. If numerous attempts prove unsuccessful, a fax may be used.

## **Mailed Reports**

Mailed reports are provided in duplicate or triplicate, if desired, and indicate patient information, account number, test name, result(s), and reference values.

## **Teleprinter/Fax Reports**

Patient result reports can be transmitted to a teleprinter or fax machine located at your facility. Transmissions occur every day of the week at scheduled times. The number of patient copies printed is determined by the client.
