Urine Specimen Collection

Collection Instructions
for Patients

Clinical Laboratory and Pathology Services

Urine Specimen Collection

Clean Catch (Females)

- Wash your hands with soap and water
- Cleanse the genitals with soap and water, or use a cleansing towelette provided. Hold the genitals open and cleanse from front to back.
- Repeat the cleansing with soap and water, or by using the second towelette provided.
- While holding the genitals open, begin urinating into the toilet.
- After a few seconds, move the cup into the stream of urine and collect urine until the cup is about ½ full.
- Replace the cap on the specimen and make sure that the lid is on tight.
- If any urine is present on the outside of the cup, wipe the outside of the cup with a clean paper towel or tissue paper.
- Label the container (not on the lid) with your full name, date of birth and date and time of collection.
- Wash your hands thoroughly.
- The sample must be refrigerated or stored in a cooler with ice after collection and transported to Beebe Healthcare Laboratory, Beebe Lab Express, or to your doctor's office as soon as possible. If you cannot deliver the specimen within 2 hours, put the specimen in the refrigerator and deliver within 24 hours.

Clean Catch (Males)

- Wash your hands with soap and water.
- Cleanse the head of the penis with soap and water, or use the cleansing towelette provided. If you are not circumcised, pull back the foreskin and cleanse the head of the penis. Keep the foreskin pulled back when urinating.
- Repeat the cleansing with soap and water, or by using the second towelette provided.
- Begin urinating into the toilet.
- After a few seconds, move the cup into the stream of urine and collect urine until the cup is about ½ full.
- Replace the cap on the specimen and make sure that the lid is on tight.
- If any urine is present on the outside of the cup, wipe the outside of the cup with a clean paper towel or tissue paper.
- Label the container (not on the lid) with your full name, date of birth and date and time of collection.
- Wash your hands thoroughly.
- The sample must be refrigerated or stored in a cooler with ice after collection and transported to Beebe Healthcare Laboratory, Beebe Lab Express, or to your doctor's office as soon as possible. If you cannot deliver the specimen within 2 hours, put the specimen in the refrigerator and deliver within 24 hours.

Chlamydia/GC Urine Collection for Male and Female (First catch/Dirty Urine)

- Wash your hands with soap and water.
- Do not cleanse area prior to collection.
- First voided urine is required. You should not have urinated for at least 2 hours prior to urine collection.
- Using a pen or marker, draw a line at the 10mL mark as well as the 50mL mark on the outside of the container. This is to help you visualize how much urine is needed for the test.
- Begin urinating directly into the cup.
- Replace the cap on the specimen and make sure that the lid is on tight.
- If any urine is present on the outside of the cup, wipe the outside of the cup with a clean paper towel or tissue paper.
- Label the container (not on the lid) with your full name, date of birth and date and time of collection.
- Wash your hands thoroughly.
- The sample must be refrigerated or stored in a cooler with ice after collection and transported to Beebe Healthcare Laboratory, Beebe Lab Express, or to your doctor's office as soon as possible. If you cannot deliver the specimen within 2 hours, put the specimen in the refrigerator and deliver within 24 hours.
