# *Requests/Reporting*

## **Reference Values**

All reference values listed are for adult normals unless otherwise indicated.

## **Reporting Patient Results**

Lab results are available for retrieval immediately after being accepted into the Laboratory Information System.

If the physician is on Epic, an electronic report will be sent to the provider's InBasket.

Results will be called or faxed to the physician's office upon special request.

## Mailed Reports

Mailed reports are provided and indicate patient information, account number, laboratory control number, test name, result, and normal values, when requested by clients.

## **Special Request Slips**

There are some tests which are not done in-house, but rather are sent out to another reference laboratory. In such cases, it may be necessary to complete a request form from that facility. The tests requiring a special form will have a notation in the specimen requirements. These request forms are supplied by ThedaCare Laboratory upon request. Please ensure that all additional requested clinical information is provided. Type or clearly print all information, always including patient's age, sex, and collection date and time.
